Jerin Roberts

Curriculum Vitae

Education

April, 2015 **Bachelors of Science**, *Thompson Rivers University*, *GPA – 3.56/4.33.*
Major Physics

Experience

Fall 2015 **Undergraduate Research Assistant**, TRIUMF, Vancouver, BC.
M9 Prototype Muon Spectrometer Project
Detailed achievements:
- Designed and constructed Experimental Spectrometer for Silicon Photomultiplier (SiPM) and DAQ testing on beam-line.
- Designed Linux based Simulation (C/C++) to determine theoretical spectrometer resolution with openGL visualization and ROOT analysis.
- Setup and Conducted experimental tests of spectrometer DAQ using VME hardware and Midas software.

Summer 2014 **Undergraduate Research Assistant**, SNOLAB, Sudbury, Ontario.
SNO+ Experiment: Umbilical Retrieval Mechanism (URM) Project
Detailed achievements:
- Designed and implemented chain drive system on URM vastly improving performance
- Re-Designed/fabricated Pulley Wheels using AutoCAD/3D printer
- FEM analysis to verify pulley integrity
- Assisted PMT assembly on SNO+ in class 2000 and 5000 underground clean labs

Summer 2013 **Undergraduate Research Assistant**, Thompson Rivers University, Kamloops, BC.
Bluebird tracking using RFID technology.
Detailed achievements:
- Designed housings for electronics/feeders optimized for 3D-printing
- Designed RFID circuit boards using EagleCAD software
- Wrote program for Interfacing sensors with Raspberry Pi and Arduino platforms.
- RFID Antenna tuning and construction.

Computer skills

Languages/ Libraries: C/C++, Java, LaTeX, Assembly, OpenGL, OpenCV, ROOT, Midas

OS/Programs: Ubuntu 14, Bash, Github, Windows 7/8/10, Solidworks, AutoCAD, FreeCAD, Eagle CAD, ROOT, R, MIDAS, Labview, Z88Aurora

2165 Westsyde Rd. – Kamloops, BC, Canada, V2B 7C3
(250) 682 6536 • ☎ (250) 318 0687 • ✉ robertsj@snolab.ca

Devices VME ADC/TDC, Arduino, Altera FPGA, Raspberry pi, Newport Stepper Motors/Drivers, Tektronix (tekVISA)

Awards

2013 Undergraduate Research Experience Award Program (UREAP)

Volunteer Work

2010-Present Physics Help Center hosted by Phi-6 Club (current member)

2012-2014 Physics Magic Show Presentation

2012-2013 Open House Science Night Presenter

Hobbies and Interests

- Raspberry Pi Apps
- RC Helicopters/Aircraft
- DH Biking
- High Altitude Ballooning
- Model Rocketry
- Flight Simulation

March 8, 2016

Dear Director of Human Resources,

I am writing to apply for the Product Designer position offered at Philips Lighting. I welcome the opportunity to bring my research and engineering skills to the Philips team. As you can see from my attached resume, I developed my design and engineering skills through several research and co-op positions.

During summer and fall 2015, I was involved in the development of the M9 prototype muon spectrometer currently being designed and built at TRIUMF. Under the supervision of Dr. Syd Kreitzman, I designed and constructed a muon spectrometer used for testing prototype sensors and DAQ electronics. This work required producing professional models and drawings in Solidworks for both the on-site machine shop and 3D printer. I also designed a simulation in C++ using a ROOT analyzer and openGL visualizer to help determine the resolution of the new spectrometer for different geometrical configurations of scintillation pieces. My work at TRIUMF has enabled me to refine my engineering and programming abilities which will be an asset for my future career goals.

In the Summer of 2014 I worked at SNOLAB under the supervision of Dr. Christine Kraus on the SNO+ experiment. During my term I spent a great deal of time engineering solutions to correct the slippage issues plaguing the umbilical retrieval mechanisms, a device responsible for lowering radioactive sources into the multi-million dollar detector. In addition to redesigning high-traction pulleys, I also designed and fabricated a chain-drive system which successfully met budget, space and radioactivity requirements. My time with SNOLAB has given me great technical experience that I believe combined with my mechanical intuitiveness and knowledge of physics will aid me during my professional development and advancement within engineering.

For a directed studies project at Thompson Rivers University I designed and constructed operational sensors for a high altitude balloon using a LPKF circuit milling machine and Eagle CAD drafting software. The quality circuits included a transmitter/receiver interface, GPS telemetry APRS transmitter, a cosmic radiation detector, accelerometer and atmospheric sensors all designed as Arduino shields. Thompson Rivers University has given me hands-on experience which coupled with my problem solving capabilities will be invaluable towards my professional career.

I hope to hear from you soon to discuss how I can become a valued member of your organization. I look forward to starting my engineering career, as well as pursuing opportunities for professional development and advancement within Philips Lighting. Thank you for your kind consideration of my qualifications.

Sincerely yours,

Jerin Roberts
